Acceptance Letter

Paper ID	Paper Title	Author(s)
ICSCDS-0201	An AI-Powered Voice Receptionist Framework for Smart Campus Communication and Information Access	Bhuvaneswaran B, Kamalesh S P, Akash N, Guru Raja T, Subramani A,

Decision: Acceptance with Major Revision

Herewith, the conference committee of the **4th International Conference of Sustainable Computing and Data Communication Systems [ICSCDS 2026]** is pleased to inform you that the above-mentioned research article has been **accepted** for presentation and publication in ICSCDS Conference Proceedings. ICSCDS-2026 will be held during 15-17, December 2026 at Shree Venkateshwara Hi-tech Engineering College, India.

We congratulate you on being successfully selected for the presentation and publication of your research work in our esteemed conference.

Best Regards,

Dr. K. M. Arunraja
Conference Chair - ICSCDS-2026

Proceedings by

REVIEW COMMENTS

Review Comments:1-

1. The evaluation uses only 18 answerable and 2 unsupported queries, which is insufficient to establish the system's reliability across diverse institutional questions and caller conditions.
2. The relatively low RAGAS answer relevancy score of 54.33% indicates response-quality limitations that require deeper error analysis and targeted improvements.
3. The paper does not provide sufficient details about the embedding model, chunk size, overlap, retrieval similarity metric, and ChromaDB configuration for reproducibility.
4. Speech-recognition performance is not evaluated using WER, CER, accent-specific accuracy, background-noise testing, or telephone-channel conditions, despite the system relying on Faster-Whisper.
5. End-to-end response latency is not reported, including speech detection, transcription, retrieval, LLM inference, TTS synthesis, and telephony transmission delays.
6. Figure 1 should be revised and updated to improve its quality. All figure captions should be revised and updated appropriately.Combine the Conclusion and Future work sections into a single cohesive paragraph to maintain proper structural flow. The manuscript should be edited for proper English language, grammar, punctuation, spelling, and overall style.

Review Comments:2

1. The knowledge-base size, number of documents, chunking strategy, and document distribution are not reported, making the retrieval evaluation difficult to assess.
2. The embedding model used for Sentence Transformers is unspecified, so the reported retrieval performance cannot be tied to a defined representation method.
3. Only 18 answerable and two unsupported queries were evaluated, making the reported 100% accuracy highly sensitive to the small test set.
4. The 54.33% RAGAS answer-relevancy score contrasts sharply with the claimed 100% answer accuracy, but this discrepancy is not technically analyzed.
5. The evaluation does not report speech-recognition performance such as word error rate, despite Faster-Whisper being a critical component of the voice pipeline.
